Teammate Assessment

Ji Luo – lots of ideas for additional features to add later, working on layouts and probably programming involving the layouts later

Kelvin Ngo – also working on layouts, will move to cat appearance generation later if needed

Anna Kraft – I'm doing the mechanics of when cats generate and also did the writeup.

Isaiah Bentz – doing what's probably the most complex part of the project, the appearance generation of the cats. This part might end up being more collaborative just due to how complex it is, but for now Isaiah is taking the lead on it.

Everybody seems enthusiastic and eager to work on the project. No issues so far.
